

## Corfix for Excavation Crews

# Dig deep. Stay covered.

*Your Field Risks are Heavy. Your Tools Don't Have to Be.*

## Built for the Realities of Excavation

Excavation doesn't leave room for guesswork. From trench safety and spoil placement to utility locates and pipe installation, everything depends on clear documentation and fast decisions. But when your crew is chasing down signatures, digging through binders, or stuck waiting for paperwork, risk adds up fast.

Corfix brings the critical parts of your safety and compliance process together in one mobile-friendly platform. No binders. No delays. No missed paperwork when it matters most.

### **Real-Time Safety Forms**

Complete JHAs, trench inspections, dig permits, and confined space entries directly from the field. Every submission is GPS-stamped, time-stamped, and instantly visible to the office.

### **Cert Tracking Without the Binder**

Track and verify Ground Disturbance, TDG, Operator Licenses, and Confined Space certs. Supervisors can pull up team records in seconds, even if the worker left their card at home.

### ***Timekeeping That Works on Dirt***

Log hours by task or location using punch clock or timecard mode. Optional geofencing keeps things accurate. Admins can review and approve entries from their phone, without chasing down missing data.

### ***Sign-ins and Orientations Made Simple***

QR codes and Kiosk Mode let workers and visitors sign in or complete site orientations without needing an app. Every log is time-stamped and stored for easy access.

### ***Instant Access to Documents and Manuals***

Trench safety manuals, SDSs, emergency contacts, and SOPs are all one scan away. QR codes posted around site give crews access to the most current versions in real time.

## No More Delays Over Paperwork

You're ahead of schedule. The trench is prepped. But you're stuck waiting for a form to clear, or a cert to get verified. That's time your crew loses and your margin eats.

Corfix keeps your documentation where your work is: in the field. Whether you're prepping a pad, laying pipe, or working around live infrastructure, you'll have the records to prove you did it right.

## What You Get with Corfix

- Integrated time tracking built for task-based and multi-site excavation work
- Digital trench inspections, JHAs, and entry permits—GPS-tagged and audit-ready
- Instant access to safety manuals, SOPs, and engineered drawings in the field
- Certification tracking for Ground Disturbance, Confined Space, and TDG
- Mobile sign-in and orientation logs with QR code access and Kiosk Mode
- Reliable documentation in low-signal zones with offline support
- Searchable submission history and expiry alerts for full compliance visibility
