

Corfix for Mechanical & HVAC Contractors

Keep Your Crew Aligned and Accountable

From mechanical rooms to rooftops, HVAC crews juggle hot works, confined spaces, pressure testing, and system commissioning. At the same time, they coordinate with other trades and shifting project schedules. Paperwork gets lost between shifts, inspections stall, and records are never where they need to be.

Corfix keeps every inspection, permit, and certification visible and connected in one place.

Permits and Inspections Without the Pileup

Hot work permits, confined space entries, pre-start checklists, and pressure test reports can all be completed on mobile forms and synced instantly. Supervisors can review, approve, and verify sign-offs from anywhere on site.

Certification Tracking That Keeps Up

Gas fitter, brazing, confined space, and fall protection certificates are tracked automatically. Supervisors get alerts before they expire and can pull up proof in seconds during an inspection.

Access Plans and Manuals in Seconds

Mechanical layouts shift daily as systems are installed and tested. On large commercial jobs, equipment locations can change from one day to the next. Corfix keeps as-builts, equipment manuals, and SDS sheets current and one scan away. No binder, no confusion.

Real-Time Safety Documentation

Toolbox talks, daily hazard assessments, and equipment pre-use inspections can be completed directly from the field. Every submission is time-stamped, location-stamped, and ready for audit review.

Integrated Timekeeping That Enforces Compliance

Corfix connects time and safety. Crews can't clock out until their required forms are complete and verified, so documentation always stays accurate.

What You Get with Corfix

- Digital hot works and confined space permits synced in real time
- Automatic tracking for gasfitter, brazing, and confined space certs
- Pressure test and equipment commissioning forms stored and searchable
- Access to as-builts, SDSs, and SOPs from any device
- Supervisor dashboards with expiry alerts and completion status
- Offline functionality for basements, rooftops, and low-signal zones
- Timekeeping tied to safety completion for full accountability
